Public Notice

April 18, 2016

Momentive Performance Materials operates two hazardous waste incinerators at its facility in Waterford, New York that are subject to 40 CFR 63, Subpart EEE, National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors. This regulation establishes Maximum Achievable Control Technology (MACT) emission standards for hazardous waste incinerators and requires completion of Comprehensive Performance Tests (CPT) and Continuous Monitoring System (CMS) performance evaluations on a periodic basis in order to demonstrate compliance with the emission standards.

Momentive will be completing CPTs for both of its incinerators during 2016. A CPT and CMS evaluation for the Rotary Kiln Incinerator (RKI) will be conducted during the week of June 20, 2016. A CPT and CMS evaluation for the Fixed Box Incinerator (FBI) will be conducted during the week of October 24, 2016. Typically, each test will occur over a period of 2-3 days during the designated weeks, however, the facility has up to 60 days from the date of test commencement to complete each test. These test dates may change depending upon the availability of resources necessary to complete the tests.

New York State Department of Environmental Conservation approved Momentive's CPT and CMS plans on March 8, 2016. As required by 40 CFR 63.1207e(2), Momentive's CPT plans and CMS evaluation plans will be available for review for a minimum of 60 days prior to test commencement. Momentive has made the plans available as of the date of this public notice at the following website: <http://momentivewaterford.com/>

Any questions regarding these tests can be directed to the regulatory agency representative or the Momentive representative listed below:
